Glossary

Name	Description
Category	A group of products items that have something in common. The main menu of the store is organised into categories and subcategories of products.
Product Types	Magento classifies products as one of several predefined product types including simple product, virtual product, downloadable product, grouped product, configurable product, bundle product, and gift card.
Attribute	A characteristic or property of a product that describes some aspect of the product. Examples: color, size, weight, price, age, gender, etc.
Attribute Set	A collection of attribute groups, customised for a specific product. Example: A T-shirt attribute set might include color, size, gender, and brand.
